

Fund Summary

The Teucrium AiLA Long-Short Base Metals ETF delivers access to metals focused quantitative strategy that has the potential to achieve positive returns regardless of market direction.

Similar strategies are typically only available at the institutional level for qualified investors.

OAIB seeks to track the total return performance, before fees and expenses, of the AiLA-S022 Index, a sophisticated long-short investment strategy in the metals sector.

Investors seeking exposure to base- metals may consider OAIB as a core holding.

About AiLA

AiLA is a leading provider of alternative alpha strategies in the Commodities Sector. AiLA's Indices offer a systematic approach, utilizing proprietary machine-learning technology with the goal of turning *data* into *alpha* (i.e. generating returns in excess of the market).

More Information on the Index <https://ailaindices.com/AiLA-S022.php>

Why OAIB:

- Potential to benefit from up, down, or sideways-moving markets
- Liquid, low-cost, quantitative long-short strategy
- Transparent index methodology
- Daily evaluation of market trading signals
- May be positioned as the core base metals holding in a diversified commodity sleeve
- ETF traded on the New York Stock Exchange
- Managed by Teucrium, provider of agricultural futures-based ETFs since 2010
- 1099 Tax Treatment

*** AN INVESTMENT CAN NOT BE MADE DIRECTLY INTO AN INDEX.

Fund Objective: OAIB seeks to track the total return performance, before fees and expenses, of the AiLA-S022 Market Neutral Absolute Return Index. The asset allocation among the Component Futures Contracts in the Index is based on an opportunity of return given a unit risk in a defined investment period. The timing of this asset allocation is determined by a set of factors defined as micro and macro features. Micro features are specific to the asset such as corn or soybeans and macro features are generalized across different assets for each Fund. Depending on the state of the world, these micro and macro features determine if it is a valid time to invest. Once the decision to invest is made, the quantum of allocation is determined by the portfolio metrics such as target volatility, maximum drawdown thresholds, Sharpe ratio, cash utilization, asset liquidity, term structure, correlations, and rebalance frequencies. The Index Provider utilizes quantitative analysis to reallocate the Component Futures Contracts.

The Market Price used herein is the actual 4pm close price as reported by the NYSE.

* As of Prospectus dated 08.31.2023 (see risks and disclosure)

** As of 03.31.2024

^The fund benchmark is AiLA-S022. BCOM is the Performance Comparison Indices defined on page 2.

Risks and Disclosure

- *Commodities and futures generally are volatile, and instruments whose underlying investments include commodities and futures are not suitable for all investors.*
- ***You should consider the fund's investment objectives, risks, and charges and expenses carefully before you invest. The Prospectus, which may be obtained without charge, by calling the Fund at 1-800-617-0004, visiting www.teucrium.com or writing to the Fund, c/o U.S. Bank Global Fund Services, P.O. Box 701, Milwaukee, Wisconsin 53201-0701., contains this and other information about the fund, and should be read carefully before investing.***
- *OAIB is a "non-diversified" investment company under the Investment Company Act of 1940, as amended and, therefore, may invest a greater percentage of its assets in a particular security than a diversified fund. OAIB is a commodity pool regulated by the CFTC.*
- ***OAIB is new and has limited operating history.***
- *OAIB short selling involves the sale of commodities. The short seller profits if the commodity's price declines. If a shorted commodity increases in value, a higher price must be paid to cover the short sale, resulting in a loss. The amount the Fund could lose on a short sale is theoretically unlimited.*
- *OAIB employs a "passive management" approach that seeks investment results that correspond (before fees and expenses) generally to the performance of its underlying index. There is no guarantee that the Fund will achieve a high degree of correlation to the underlying Index and therefore achieve its investment objective. Differences in timing of trades and valuation as well as fees and expenses, may cause the fund to not exactly replicate the index known as tracking error.*
- *Because the Fund will invest primarily in commodity futures contracts and other derivative instruments based on the price of the underlying commodities, an investment in the Fund will subject the investor to the risks of that commodity market, and this could result in substantial fluctuations in the price of the Fund's shares.*
- *Shares of the Fund are not insured by the Federal Deposit Insurance Corporation ("FDIC"), may lose value and have no bank guarantee.*
- *Investors may choose to use the Fund as a means of investing indirectly in commodities, and there are risks involved in such investments.*
- *This material is not an offer or solicitation of any kind to buy or sell any securities outside of the United States of America.*
- ***Diversification does not ensure a profit or protect against loss.***

Futures Risks: **Commodities and futures investing is generally volatile and risky which may not be suitable for all investors.** Futures may be affected by Backwardation, where distant futures prices are lower than near delivery months, potentially benefiting the fund; and Contango, where distant futures prices exceed spot prices, possibly lowering the fund's total return due to selling cheaper contracts and buying more expensive ones.

Definitions

Intraday Indicative Value (IIV): An Intraday Indicative Value is published by NYSE Alternext US for each Exchange Traded Product (ETP) as a reference value to be used in conjunction with other ETP market information.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

BCOM: Source: Bloomberg Index Services Limited. "Bloomberg®", the "Bloomberg Commodity Index" and the names of the other indices and subindices that are part of the Bloomberg Commodity Index family (such indices and subindices collectively referred to as the "BCOM Indices") are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited, the administrator of the indices (collectively, "Bloomberg"). AILA S022 - The Index was developed by AiLA Indices and is designed to track the performance of a liquid, absolute return strategy utilizing Industrial Metal commodity futures contracts traded on the Chicago Board of Trade ("CBOT") or London Metals Exchange ("LME") to provide exposure to the Industrial Metals market. More information on the index can be found on page 1 or in the prospectus.
