Investing in Corn, Wheat and Soybean Interests subjects CORN, WEAT, SOYB and TAGS to the risks of the these market, and this could result in substantial fluctuations in the price of Teucrium Funds shares. Unlike mutual funds, Teucrium Funds generally will not distribute dividends to Shareholders. Investors may choose to use Teucrium Funds as a means of investing indirectly in each Fund, and there are risks involved in such investments. The Sponsor has limited experience in operating a commodity pool, which is defined as an enterprise in which several individuals contribute funds in order to trade futures or futures options collectively. Investors may choose to use the Teucrium Funds as a vehicle to hedge against the risk of loss and there are risks involved in hedging activities. This material is not an offer or solicitation of any kind to buy or sell any securities outside of the United States of America. **Commodities and futures generally are volatile and are not suitable for all investors.**

The Teucrium Funds are not mutual fund or any other type of Investment Company within the meaning of the Investment Company Act of 1940, as amended, and is not subject to regulation there under.

Shares of the Teucrium Funds are not FDIC insured, may lose value and have no bank guarantee.

All supporting documentation will be provided upon request.

Foreside Fund Services, LLC is the distributor for the Teucrium Corn Fund, Teucrium Wheat Fund, Teucrium Soybean Fund and Teucrium Agricultural Fund.

The Teucrium Funds have a patent on the methodology employed by the Funds.

¹ in millions of bushels per day

Yield: Yield per acre; how many bushels can be produced from an acre of land.

Beginning Stocks (also called carry-in): The amount of corn that will be or is available at the beginning of the crop year from the previous year's harvest.

Ending Stocks (also called carry-out): The amount of corn that will be available at the end of the crop year, given the estimated or actual beginning stocks, production and usage.

Stocks/Use Ratio: Ending stocks divided by total usage.

Demand per Day: Total demand, also known as usage, including exports, divided by three hundred sixty-five days.

Carry-out day's supply: Ending stocks divided by demand per day.

Crop Year 2007-08 to 2018-19

Million Metric Tons

Ending Stocks (also called carry-out): The amount of soybeans that will be available at the end of the crop year, given the estimated or actual beginning stocks, production and usage.

U.S. Wheat Ending Stocks (Inventory)

Crop Year 2007-08 to 2018-19

Million Bushels

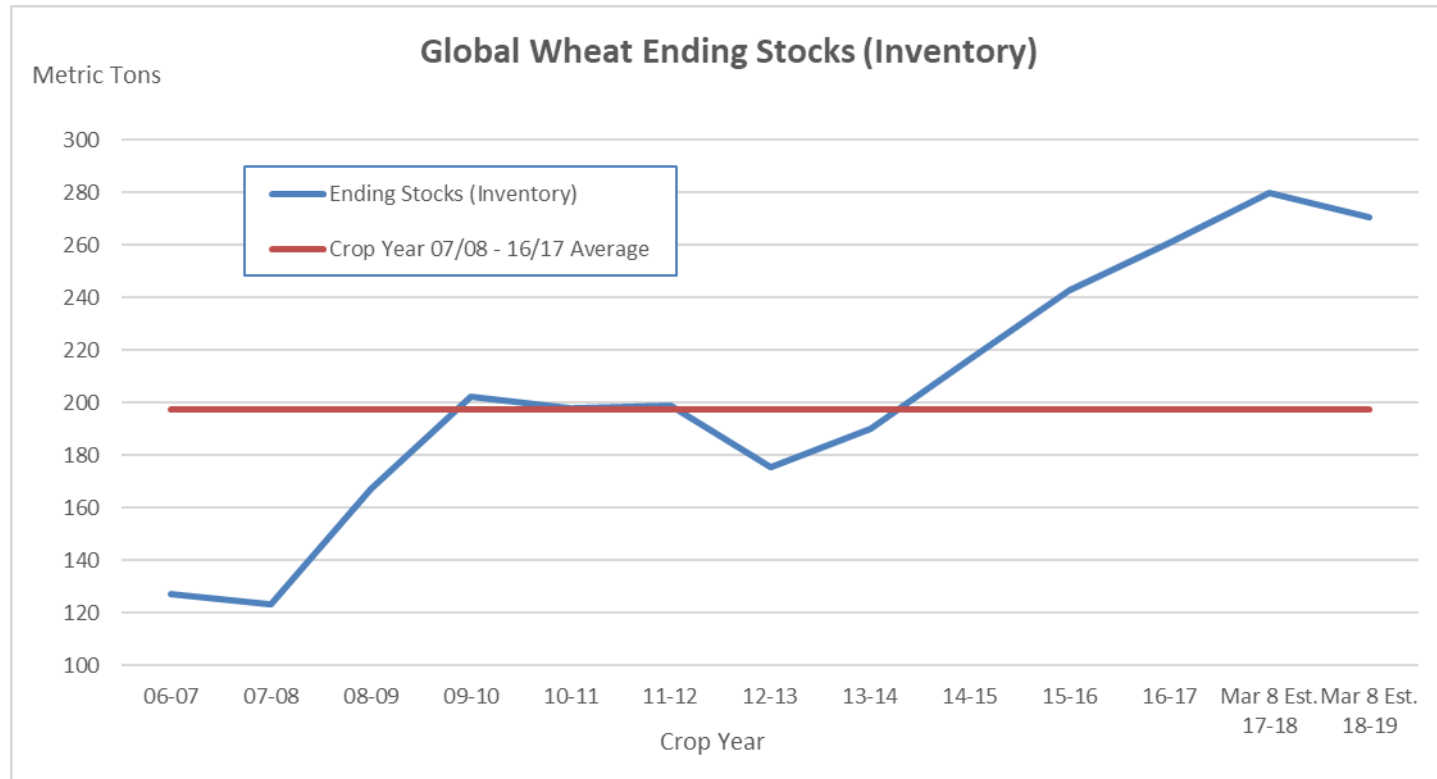

Ending Stocks (also called carry-out): The amount of wheat that will be available at the end of the crop year, given the estimated or actual beginning stocks, production and usage.

Global Wheat Ending Stocks (Inventory)

Crop Year 2007-08 to 2018-19

Million Metric Tons

Ending Stocks (also called carry-out): The amount of wheat that will be available at the end of the crop year, given the estimated or actual beginning stocks, production and usage.

Beginning Stocks (also called carry-in): The amount of corn that will be or is available at the beginning of the crop year from the previous year's harvest.

Ending Stocks (also called carry-out): The amount of soybeans that will be available at the end of the crop year, given the estimated or actual beginning stocks, production and usage.

Significance: In 2009, according to the USDA, Brazil and Argentina, together, produced approximately 10% of the world's corn. These two countries represent the largest producers in the southern hemisphere, acting as a contra-producer to northern hemisphere crop production.
