Supplement dated January 30, 2026

**to the Summary Prospectuses, Prospectus and Statement of Additional Information (“SAI”)
dated April 30, 2025, as supplemented**

Mr. Spencer Kristiansen, a Portfolio Manager for the Funds, has resigned from Teucrium Investment Advisors, LLC, effective January 30, 2026. Accordingly, all references to Mr. Kristiansen as a Portfolio Manager in the Funds’ Prospectus, Summary Prospectuses and SAI are hereby deleted. Messrs. Harris, Haugens and Small will continue to serve as Portfolio Managers of the Funds.

**The Fund has not yet commenced operations and is not available for purchase.*

**Supplement dated August 1, 2025
to the Summary Prospectus and Prospectus
dated April 30, 2025, as supplemented**

Effective immediately, Mr. Chris Small will be added as a Portfolio Manager of the Funds. As a result, the following disclosures in the Funds’ Prospectus and Summary Prospectus are hereby revised to reflect the addition of Mr. Small as a Portfolio Manager:

The disclosure in the Fund Summary section in the Prospectus and Summary Prospectus entitled “Management - Portfolio Managers” for each Fund is deleted and replaced with the following:

Management

Portfolio Managers: Springer Harris, Spencer Kristiansen and Joran Haugens, each Portfolio Managers of the Adviser, have been portfolio managers of the Fund since its inception. Chris Small, a Portfolio Manager of the Adviser, has been a portfolio manager of the Fund since July, 2025.

The disclosure in the Prospectus in the section entitled “Management - Portfolio Managers” is deleted and replaced with the following:

Portfolio Managers

Springer Harris, Spencer Kristiansen, Joran Haugens and Chris Small are jointly and primarily responsible for the day-to-day management of the Funds’ portfolios.

Mr. Harris joined the Adviser in April 2011. He has primary responsibilities for the Trade Operations for the Teucrium Funds. Prior to 2011, Mr. Harris was an Account Executive with Emergent Social Media Team at Weber Shandwick, a global public relations firm. He graduated cum laude with a B.A. in Business Management.

Mr. Kristiansen joined Teucrimum Trading, LLC in July of 2022. He has responsibilities for Trade Operations and analysis for the Teucrimum Funds. Prior to joining the firm, Mr. Kristiansen was an Investment Counselor for Fisher Investments from December 2021 until July 2022 and a Portfolio Advisor for Bank of America Merrill Lynch from January 2019 until September 2021. He graduated summa cum laude from Champlain College with a B.S. in Finance in 2018.

Mr. Haugens joined Teucrimum Trading, LLC in December of 2022. He has responsibilities for trade operations and execution for the Teucrimum Funds. Prior to joining the firm, he worked as an account executive at ED&F Man Capital with a focus on agricultural commodities providing support, information, research, account management and execution for a wide range of customers. Mr. Haugens has more than 20 years of experience in execution and is Series 3 certified.

Mr. Small joined Teucrimum Trading, LLC in April of 2025. He is responsible for the execution and implementation of Teucrimum's growing suite of ETF's and contributes to the development of new products in Teucrimum's multi-asset white-label platform. Prior to joining the firm, he worked as the Director of Trading at Boston-based asset manager Windham Capital from March 2015 until December 2024. Mr. Small graduated from Middlebury College in Vermont and studied economics, premedical coursework, and political science.

The Funds' SAI provides additional information about the Portfolio Managers' compensation structure, other accounts that the Portfolio Managers manage and the Portfolio Managers' ownership of Shares.

The change described above will not affect the day-to-day management of the Funds or their Total Annual Fund Operating Expenses.

Please retain this supplement with your Prospectus and Summary Prospectus

Before you invest, you may want to review the Fund's prospectus and statement of additional information ("SAI"), which contain more information about the Fund and its risks. The current prospectus and SAI dated April 30, 2025, are incorporated by reference into this Summary Prospectus. You can find the Fund's prospectus, reports to shareholders, and other information about the Fund online at www.teucrium.com. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

Important Information About the Fund

Teucrium 2x Daily Corn ETF ("2x Daily Corn ETF" or the "Fund") seeks daily investment results, before fees and expenses, that correspond to two times (2x) the price of corn for future delivery **for a single day**, not for any other period. A "single day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. **The return of the Fund for periods longer than a single day will be the result of its return for each day compounded over the period. The Fund's returns for periods longer than a single day will very likely differ in amount, and possibly even direction, from the Fund's stated multiple (2x) times the return of daily changes in the price of corn for future delivery for the same period. For periods longer than a single day, the Fund will lose money if corn's performance is flat, and it is possible that the Fund will lose money even if the price of corn for future delivery increases.** Longer holding periods, higher volatility in the price of corn for future delivery, and greater leveraged exposure each exacerbate the impact of compounding on an investor's returns. During periods of higher corn volatility, the volatility of corn may affect the Fund's return as much as or more than the return of the price of corn for future delivery.

The Fund presents different risks than other types of funds. The Fund uses leverage and is riskier than similarly benchmarked funds that do not use leverage. The Fund may not be suitable for all investors and should be used only by knowledgeable investors who understand the consequences of seeking daily leveraged (2x) investment results, including the impact of compounding on Fund performance. The Fund is intended to be used as a short-term trading vehicle. Investors in the Fund should actively manage and monitor their investments, as frequently as daily. The Fund is not intended to be used by, and is not appropriate for, investors who do not actively monitor and manage their portfolio. An investor in the Fund could potentially lose the full principal value of their investment within a single day. The Fund does not intend to take physical delivery of the corn associated with the Corn Futures Contracts (defined below) in which it invests. Instead, the Fund seeks to benefit from increases in the price of Corn Futures Contracts for a single day.

Investment Objective

The 2x Daily Corn ETF seeks daily investment results, before fees and expenses, that correspond to two times (2x) the daily price performance of corn. **The Fund does not seek to achieve its stated investment objective over a period of time greater than a single day.**

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

| Shareholder Fees (fees paid directly from your investment) | None |
|--|---------------|
| Annual Fund Operating Expenses¹ (expenses that you pay each year as a percentage of the value of your investment) | |
| Management Fee ¹ | 1.49% |
| Distribution and/or Service (12b-1) Fees | 0.00% |
| Other Expenses ² | 0.00% |
| Total Annual Fund Operating Expenses² | 1.49% |
| Less Fee Waiver ¹ | <u>-0.54%</u> |
| Total Annual Fund Operating Expenses After Fee Waiver^{1,2} | 0.95% |

¹ Teucrium Investment Advisors, LLC (the “Adviser”), the Fund’s investment adviser, provides the Subsidiary with the same type of management, under essentially the same terms, as it provides the Fund, including that the Adviser has agreed to pay all expenses of each Subsidiary except for the management fee paid to the Adviser pursuant to its investment management agreement with each Subsidiary. The Adviser has contractually agreed to waive the management fee it receives from the Fund in an amount equal to the management fee paid to the Adviser by the Subsidiary (defined below). This waiver will continue in effect for so long as the Fund invests in the Subsidiary, and at least through April 30, 2026. This waiver may be terminated only with the approval of the Fund’s Board of Trustees (the “Board”). The Adviser has contractually agreed to waive its Management Fee and/or reimburse Fund expenses, including acquired fund fees and expenses, to limit the Fund’s total annual operating expenses to 0.95% of the Fund’s average daily net assets until at least April 30, 2026. This agreement may be terminated only by, or with the consent of the Board.

² Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

| | | | |
|---------------|-------------|----------------|--------------|
| 1 Year | \$97 | 3 Years | \$303 |
|---------------|-------------|----------------|--------------|

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. For the fiscal period December 12, 2024 (commencement of operations) through December 31, 2024, the Fund’s portfolio turnover rate was 0% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective primarily through managed exposure to corn futures contracts (“Corn Futures Contracts”) that trade only on an exchange registered with the Commodity Futures Trading Commission (“CFTC”), and cash, cash-equivalent or high-quality securities that serve as collateral to the Fund’s investments in Corn Futures Contracts (“Collateral Investments”). In this manner, the Fund seeks to provide daily leveraged exposure to the price of corn to seek returns equal to 200% of the daily price performance of corn. The Fund does not intend to take physical delivery of corn associated with the Corn Futures Contracts. Instead, the Fund seeks to benefit from increases in the price of Corn Futures Contracts for a single day.

The Fund also may invest in “Other Investments,” which may include: (i) reverse repurchase agreement transactions; (ii) shares of other Corn-linked exchange traded investment products (“Corn-Linked ETPs”) not registered as investment companies under the Investment Company Act of 1940, as amended (the “1940 Act”), which may include affiliated Corn-Linked ETPs such as Teucrium Corn Fund (Ticker: CORN), the sponsor of which wholly owns and controls the Adviser; and (iii) swap agreement transactions that reference corn, Corn-Linked ETPs, Corn Futures Contracts, or corn-related indexes (such as the Bloomberg Corn Subindex, S&P GSCI Corn or Teucrium Corn Fund Benchmark Index).

The Fund invests, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Corn Futures Contracts and Other Investments that in the aggregate provide exposure to the price movements of corn.

Unlike many other commodity-based exchange-traded products, the Fund will not issue its shareholders a Schedule K-1 for tax reporting purposes, which can increase the complexity of a shareholder’s tax reporting. Instead, the Fund is designed to be taxed as a conventional mutual fund and will issue a Form 1099 to its shareholders for tax reporting purposes. A consequence of the Fund’s tax status is that it generally is limited to obtaining its exposure to Corn Futures Contracts through the Subsidiary, which is defined and described in the paragraphs that follow.

The Fund expects to invest in Corn Futures Contracts primarily indirectly through a wholly-owned subsidiary organized under the laws of the Cayman Islands (the “Subsidiary”). To seek to achieve 2x daily exposure to corn, the Fund intends to typically enter into Corn Futures Contracts as the “buyer.” In order to maintain its 2x daily exposure to corn, the Fund intends to exit its futures contracts as they near expiration and replace them with new futures contracts with a later expiration date. This process is referred to as “rolling.” The Fund may invest in Corn Futures Contracts of any expiration date traded on any CFTC-regulated commodity futures exchange, also known as a “designated contract market” (“DCM”). However, there can be no guarantee that such a strategy will produce the desired results.

The Fund's investment in the Subsidiary is intended to provide the Fund with exposure to Corn Futures Contracts, a type of commodities futures contract, within the limits of current federal income tax laws applicable to investment companies such as the Fund, which limit the ability of investment companies to invest directly in commodities futures and certain other investments that do not generate qualifying income for tax purposes. The Subsidiary, which is also managed by the Adviser, has the same investment objective as the Fund, but it may invest in commodities futures and similar investments, including certain Other Investments, to a greater extent than the Fund. Except as otherwise noted, for purposes of this Prospectus, references to the Fund's investments include the Fund's indirect investments through the Subsidiary. Because the Fund intends to elect to be treated as a regulated investment company ("RIC") under the Internal Revenue Code of 1986, as amended (the "Code"), the size of the Fund's investment in the Subsidiary generally will be limited to 25% of the Fund's total assets, tested at the end of each fiscal quarter.

The Fund will attempt to achieve its investment objective without regard to overall market movement or the increase or decrease of the price of corn. At the close of the markets each trading day, the Adviser determines the type, quantity and mix of investment positions so that its exposure to price of corn is consistent with the Fund's investment objective. The impact of movements in the price of corn during the day will affect whether the Fund's portfolio needs to be re-positioned. For example, if the price of corn has risen on a given day, net assets of the Fund should rise, meaning the Fund's exposure will need to be increased. Conversely, if the price of corn has fallen on a given day, net assets of the Fund should fall, meaning the Fund's exposure will need to be reduced.

The Adviser may determine to modify the extent of the Fund's exposure to Corn Futures Contracts in order to avoid exceeding any position limits applicable to Corn Futures Contracts established by the applicable DCM. These position limits may hinder the Fund's ability to enter into the desired amount of Corn Futures Contracts at times. Because of the anticipated size of the Fund's Corn Futures Contracts holdings relative to the size of the futures market, the Adviser does not anticipate that position limits will adversely affect the Fund's ability to seek its target exposure until the Fund's assets under management grow significantly. Any determination to modify the Fund's exposure to Corn Futures Contracts may cause the Fund to liquidate its Corn Futures Contracts holdings at disadvantageous times or prices, potentially subjecting the Fund to substantial losses, and prevent the Fund from achieving its investment objective.

The Fund will also invest in Collateral Investments. The Collateral Investments may consist of: (i) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (ii) money market funds; and/or (iii) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or determined by the Adviser to be of comparable quality. Such Collateral Investments are designed to provide liquidity, serve as margin or otherwise collateralize the Fund's investments in Corn Futures Contracts and certain Other Investments.

The Fund is classified as a "non-diversified" investment company under the 1940 Act and, therefore, may invest a greater percentage of its assets in a particular issuer than a diversified fund. The Fund will not concentrate its investments (*i.e.*, hold more than 25% of its total assets) in any industry or group of related industries. The Fund, however, will invest more than 25% of its total assets in investments that provide exposure to corn.

Daily rebalancing and the compounding of each day's return over time means that the return of the Fund for a period longer than a single day will be the result of each day's returns compounded over the period, which will very likely differ in amount, and possibly even direction, from two times (2x) the price performance of corn for the same period. The Fund will lose money if the price performance of corn is flat over time, and the Fund can lose money regardless of the performance of the price of corn, as a result of daily rebalancing, the volatility of the price of corn, compounding of each day's return and other factors. See "Principal Risks" below.

Corn Futures Contracts

Futures contracts are agreements between two parties that are executed on a DCM, *i.e.*, a commodity futures exchange, and that are cleared and margined through a derivatives clearing organization ("DCO"), *i.e.*, a clearing house. One party agrees to buy a commodity such as corn from the other party at a later date at a price and quantity agreed upon when the contract is made. Such contracts may also be referred to as "non-spot" futures contracts to differentiate from spot contracts, in which the purchase of the commodity occurs immediately. In market terminology, a party who purchases a futures contract is long in the market and a party who sells a futures contract is short in the market. The contractual obligations of a buyer or seller may generally be satisfied by taking or making physical delivery of the underlying commodity or by making an offsetting sale or purchase of an identical futures contract on the same or linked exchange before the designated date of delivery. The difference between the price at which the futures contract is purchased or sold and the price paid for the offsetting sale or purchase, after allowance for brokerage commissions, constitutes the profit or loss to the trader.

Futures contracts with a longer term to expiration may be priced higher than futures contracts with a shorter term to expiration, a relationship called "contango". When rolling futures contracts that are in contango the Fund will close its long position by selling the shorter term contract at a relatively lower price and buying a longer-dated contract at a relatively higher price. The presence of contango will adversely affect the performance of the Fund, and could result in a negative yield for the Fund. Conversely, futures

contracts with a longer term to expiration may be priced lower than futures contracts with a shorter term to expiration, a relationship called “backwardation”. When rolling long futures contracts that are in backwardation, the Fund will close its long position by selling the shorter term contract at a relatively higher price and buying a longer-dated contract at a relatively lower price. The presence of backwardation may positively affect the performance of the Fund.

If circumstances arise where market prices for Corn Futures Contracts are not readily available, the Fund will fair value its Corn Futures Contracts in accordance with its pricing and valuation policy and procedures for fair value determinations. Pursuant to those policies and procedures, the Adviser would consider various factors, such as pricing history; market levels prior to price limits or halts; supply, demand, and open interest in Corn Futures Contracts; and comparison to other major commodity futures. The Adviser would document its proposed pricing and methodology, detailing the factors that entered into the valuation.

Corn

Corn is currently the most widely produced livestock feed grain in the United States. The two largest demands of the United States’ corn crop are used in livestock feed and ethanol production. Corn is also processed into food and industrial products. The United States Department of Agriculture (the “USDA”) publishes weekly, monthly, quarterly and annual updates for U.S. domestic and worldwide corn production and consumption, and for other grains such as soybeans and wheat, which can be used in some cases as a substitute for corn. The United States is the world’s leading producer and exporter of corn. The price per bushel of corn in the United States is primarily a function of both U.S. and global production and demand.

As a general matter, the occurrence of a severe weather event, natural disaster, terrorist attack, geopolitical events, outbreak, or public health emergency as declared by the World Health Organization, the continuation or expansion of war or other hostilities, or a prolonged government shutdown may have significant adverse effects on the Fund and its investments and alter current assumptions and expectations. Generally, these adverse effects may cause continued volatility in the price of corn, corn futures, and the price of Shares.

Other Investments

In order to help the Fund meet its daily investment objective by maintaining the daily desired level of leveraged exposure to corn, maintain its tax status as a RIC on days in and around quarter-end, help the Fund maintain its desired exposure to Corn Futures Contracts when it is approaching or has exceeded position limits or accountability levels, or because of liquidity or other constraints, the Fund may invest in the following:

Reverse Repurchase Agreements

The Fund may invest in reverse repurchase agreements which are a form of borrowing in which the Fund sells portfolio securities to financial institutions and agrees to repurchase them at a mutually agreed-upon date and price that is higher than the original sale price, and use the proceeds for investment purchases.

As a result of the Fund repurchasing the securities at a higher price, the Fund will lose money by engaging in reverse repurchase agreement transactions.

As noted above, because the Fund intends to qualify for treatment as a RIC under the Code, the size of the Fund’s investment in the Subsidiary will not exceed 25% of the Fund’s total assets at or around each quarter end of the Fund’s fiscal year (the “Asset Diversification Test”). At other times of the year, the Fund’s investments in the Subsidiary will significantly exceed 25% of the Fund’s total (or gross) assets.

When the Fund seeks to reduce its total assets exposure to the Subsidiary, it may use the short-term Treasury Bills it owns (and purchase additional Treasury Bills as needed) to transact in reverse repurchase agreement transactions, which are ostensibly loans to the Fund. Those loans will increase the gross assets of the Fund, which the Adviser expects will allow the Fund to meet the Asset Diversification Test. When the Fund enters into a reverse repurchase agreement, it will either (i) be consistent with Section 18 of the 1940 Act and maintain asset coverage of at least 300% of the value of the reverse repurchase agreement; or (ii) treat the reverse repurchase agreement transactions as derivative transactions for purposes of Rule 18f-4 under the 1940 Act (“Rule 18f-4”), including as applicable, the value-at-risk based limit on leverage risk.

Corn-Linked ETPs

The Fund may invest in shares of Corn-Linked ETPs, which are exchange-traded investment products not registered under the 1940 Act that seek to match the daily changes in the price of corn for future delivery, and trade intra-day on a national securities exchange. Corn-Linked ETPs are passively managed and do not pursue active management investment strategies, and their sponsors do not actively manage the exposure to corn held by the ETP. This means that the sponsor of the ETP does not sell corn futures contracts at times when its price is high or acquire corn futures contracts at low prices in the expectation of future price increases.

Swaps that reference corn, Corn-Linked ETPs, Corn Futures Contracts, or corn-related indexes.

The Fund may invest in cash-settled swap agreements referencing corn, Corn-Linked ETPs, Corn Futures Contracts or corn-related indexes. Swap contracts are transactions entered into primarily with major global financial institutions for a specified period ranging from a day to more than one year. In a swap transaction, the Fund and a counterparty will agree to exchange or “swap” payments based on the change in value of an underlying asset or benchmark. For example, the two parties may agree to exchange the return (or differentials in rates of returns) earned or realized on a particular investment or instrument. In the case of the Fund, the reference asset can be shares of corn, shares of Corn-Linked ETPs, Corn Futures Contracts, or corn-related indexes.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with the risks of other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”), trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your investment in the Fund:

- **Agricultural Commodities Risk.** The price and availability of agricultural commodities is influenced by economic and industry conditions, including but not limited to supply and demand factors such as: crop disease; weed control; water and fertilizer availability; various planting, growing, or harvesting problems; severe weather conditions such as drought, floods, heavy rains, frost, or natural disasters that are difficult to anticipate and that cannot be controlled. The U.S. prices of agricultural commodities may be subject to risks relating to the demand and distribution of such commodities in foreign countries, such as: uncontrolled fires (including arson); challenges in doing business with foreign companies; legal and regulatory restrictions; transportation costs; interruptions in energy supply; currency exchange rate fluctuations; and political and economic instability. Additionally, demand for agricultural commodities is affected by changes in consumer tastes, national, regional and local economic conditions, and demographic trends.

Agricultural commodity production is subject to United States and foreign policies and regulations that materially affect operations. Governmental policies affecting the agricultural industry, such as taxes, tariffs, duties, subsidies, incentives, acreage control, and import and export restrictions on agricultural commodities and commodity products, can influence the planting of certain crops, the location and size of crop production, the volume and types of imports and exports, and industry profitability. Additionally, commodity production is affected by laws and regulations relating to, but not limited to, the sourcing, transporting, storing and processing of agricultural raw materials as well as the transporting, storing and distributing of related agricultural products. Agricultural commodity producers also may need to comply with various environmental laws and regulations, such as those regulating the use of certain pesticides, and local laws that regulate the production of genetically modified crops. In addition, international trade disputes can adversely affect agricultural commodity trade flows by limiting or disrupting trade between countries or regions.

Seasonal fluctuations in the price of agricultural commodities may cause risk to an investor because of the possibility that Share prices will be depressed because of the relevant harvest cycles. In the futures market, fluctuations are typically reflected in contracts expiring in the harvest season (*i.e.*, in the case of corn, contracts expiring during the fall are typically priced lower than contracts expiring in the winter and spring). Thus, seasonal fluctuations could result in an investor incurring losses upon the sale of Shares, particularly if the investor needs to sell Shares when a Corn Futures Contract is, in whole or part, expiring in the harvest season for the specified commodity.

- *Risks Specific to Corn.* Demand for corn in the United States to produce ethanol has been a significant factor affecting the price of corn. In turn, demand for ethanol has tended to increase when the price of gasoline has increased and has been significantly affected by United States governmental policies designed to encourage the production of ethanol. Additionally, demand for corn is affected by changes in consumer tastes, national, regional and local economic conditions, and demographic trends. Finally, because corn is often used as an ingredient in livestock feed, demand for corn is subject to risks associated with the outbreak of livestock disease.
- **Cash Transaction Risk.** The Fund expects to effect all of its creations and redemptions for cash, rather than in-kind securities. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. The use of cash creations and redemptions may also cause the Fund’s shares to trade in the market at wider bid-ask spreads or greater premiums or discounts to the Fund’s NAV. Further, effecting purchases and redemptions primarily in cash may cause the Fund to incur certain costs, such as portfolio transaction costs. These costs can decrease the Fund’s NAV if not offset by an authorized participant transaction fee.

- **Clearing Broker Risk.** The failure or bankruptcy of the Fund’s and the Subsidiary’s clearing broker could result in a substantial loss of Fund assets. Under current CFTC regulations, a clearing broker maintains customers’ assets in a bulk segregated account. If a clearing broker fails to do so or is unable to satisfy a substantial deficit in a customer account, its other customers may be subject to risk of loss of their funds in the event of that clearing broker’s bankruptcy. In that event, the clearing broker’s customers, such as the Fund and the Subsidiary, are entitled to recover, even in respect of property specifically traceable to them, only a proportional share of all property available for distribution to all of that clearing broker’s customers.
- **Collateral Securities Risk.** Collateral may include obligations issued or guaranteed by the U.S. government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. government guarantees, these guarantees do not extend to shares of the Fund. The Fund’s investments in U.S. government securities will change in value in response to interest rate changes and other factors, such as the perception of an issuer’s creditworthiness. Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. At the same time, the Fund will continue to pay its own management fees and expenses with respect to all of its assets, including any portion invested in the shares of the money market fund. It is possible to lose money by investing in money market funds. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Credit risk is the risk that the Fund could lose money if the issuer of a corporate debt security is unable to pay interest or repay principal when it is due. Interest rate risk is the risk that interest rates rise and fall over time. For example, the value of fixed-income securities generally decrease when interest rates rise, which may cause the Fund’s value to decrease. Also, investments in fixed-income securities with longer maturities fluctuate more in response to interest rate changes. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.
- **Commodity-Linked Derivatives Tax Risk.** As a RIC, the Fund must derive at least 90% of its gross income each taxable year from certain qualifying sources of income under the Code. The income of the Fund from certain commodity-linked derivatives may be treated as non-qualifying income for purposes of the Fund’s qualification as a RIC, in which case, the Fund might fail to qualify as a RIC and be subject to federal income tax at the Fund level. To the extent the Fund invests directly in commodity-linked derivatives, the Fund will seek to restrict its income from such instruments that do not generate qualifying income to a maximum of 10% of its gross income (when combined with its other investments that produce non-qualifying income) to comply with the qualifying income test necessary for the Fund to qualify as a RIC under Subchapter M of the Code. However, the Fund may generate more non-qualifying income than anticipated, may not be able to generate qualifying income in a particular taxable year at levels sufficient to meet the qualifying income test, or may not be able to accurately predict the non-qualifying income from these investments.

The extent to which the Fund invests in commodity-linked derivatives may be limited by the qualifying income and asset diversification tests, which the Fund must continue to satisfy to maintain its status as a RIC. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income would be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. Failure to comply with the requirements for qualification as a RIC could have significant negative tax consequences to Fund shareholders. Under certain circumstances, the Fund may be able to cure a failure to meet the qualifying income requirement, but in order to do so the Fund may incur significant Fund-level taxes, which would effectively reduce (and could eliminate) the Fund’s returns. The tax treatment of certain commodity-linked derivatives may be affected by future regulatory or legislative changes that could affect the character, timing and/or amount of the Fund’s taxable income or gains and distributions.

- **Commodity Pool Regulatory Risk.** The Fund’s investment exposure to commodities futures will cause it to be deemed to be a commodity pool, thereby subjecting the Fund to regulation under the Commodity Exchange Act (“CEA”) and CFTC rules. The Adviser is registered as a Commodity Trading Advisor (“CTA”) and a Commodity Pool Operator (“CPO”), and the Fund will be operated in accordance with applicable CFTC rules, as well as the regulatory scheme applicable to registered investment companies. Registration as a CPO imposes additional compliance obligations on the Adviser and the Fund related to additional laws, regulations, and enforcement policies, which could increase compliance costs and may affect the operations and financial performance of the Fund.

- **Counterparty Risk.** Investing in derivatives involves entering into contracts with third parties (*i.e.*, counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (*i.e.*, the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline. The counterparty to a listed futures contract is the derivatives clearing organization for the listed future. The listed future is held through a futures commission merchant ("FCM") acting on behalf of the Fund. Consequently, the counterparty risk on a listed futures contract is the creditworthiness of the FCM and the exchange's clearing corporation.
- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, or the Fund's other service providers, market makers, Authorized Participants ("APs"), the Fund's primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund's business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders.
- **Daily Correlation/Tracking Risk.** There is no guarantee that the Fund will achieve a high degree of correlation to the price performance of corn and therefore achieve its daily leveraged investment objective. To achieve a high degree of correlation with the price performance of corn, the Fund seeks to rebalance its portfolio daily to keep leverage consistent with its daily leveraged investment objective. In addition, the Fund's exposure to the price of corn is impacted by the movement of the price of corn. Because of this, it is unlikely that the Fund will be perfectly exposed to the price performance of corn at the end of each day. The possibility of the Fund being materially over- or under-exposed to the price performance of corn increases on days when the price of corn is volatile near the close of the trading day. Market disruptions, regulatory restrictions and extreme volatility will also adversely affect the Fund's ability to adjust exposure to the required levels.

The Fund may have difficulty achieving its daily leveraged investment objective due to fees, expenses, transaction costs, financing costs related to the use of derivatives, investments in exchange-traded products, directly or indirectly, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or derivatives held by the Fund. The Fund may be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being over- or under-exposed to the price of corn. The Fund may take or refrain from taking positions to improve the tax efficiency or to comply with various regulatory restrictions, either of which may negatively impact the Fund's correlation to the price performance of corn.

- **Derivatives Risk.** The Fund's derivative investments have risks, including the imperfect correlation between the value of such instruments and the underlying assets or index; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; and illiquidity of the derivative investments. The derivatives used by the Fund may give rise to a form of leverage. Leverage magnifies the potential for gain and may result in greater losses, which in some cases may cause the Fund to liquidate other portfolio investments at inopportune times (*e.g.*, at a loss to comply with limits on leverage imposed by the 1940 Act or when the Adviser otherwise would have preferred to hold the investment) or to meet redemption requests. Certain of the Fund's transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in the Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact the Fund's after-tax returns. To the extent the Fund invests in such derivative instruments, the value of the Fund's portfolio is likely to experience greater volatility over short-term periods.

- *Futures Contracts Risk.* The successful use of futures contracts draws upon the Adviser's skill and experience with respect to such instruments and is subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund's NAV and total return, are (a) the imperfect correlation between the change in market value of the commodity future and the price of commodity; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it maybe disadvantageous to do so.

- *Cost of Futures Investment Risk.* When a commodities futures contract is nearing expiration, the Fund will generally sell it and use the proceeds to buy a commodities futures contract with a later expiration date. This practice is commonly referred to as “rolling.” The costs associated with rolling commodities futures contract typically are substantially higher than the costs associated with other futures contracts and may have a significant adverse impact on the performance of the Fund. In addition, the presence of contango in certain futures contracts at the time of rolling would be expected to adversely affect the Fund. Similarly, the presence of backwardation in certain futures contracts at the time of rolling such contracts would be expected to positively affect the Fund. The futures contracts markets have experienced, and are likely to experience again in the future, extended periods in which contango or backwardation have affected various types of futures contracts. These extended periods have caused in the past, and may cause in the future, significant losses.
- *Swap Agreements Risk.* Swap agreements are contracts among the Fund and a counterparty to exchange the return of the pre-determined underlying investment (such as the rate of return of the underlying commodity). Swap agreements may be negotiated bilaterally and traded over-the-counter (“OTC”) between two parties or, for certain standardized swaps, must be exchange-traded through a futures commission merchant and/or cleared through a clearinghouse that serves as a central counterparty. Risks associated with the use of swap agreements are different from those associated with ordinary portfolio securities transactions, due in part to the fact they could be considered illiquid and many swaps trade on the OTC market. Swaps are particularly subject to counterparty credit, correlation, valuation, liquidity and leveraging risks. While exchange trading and central clearing are intended to reduce counterparty credit risk and increase liquidity, they do not make swap transactions risk-free. Additionally, applicable regulators have adopted rules imposing certain margin requirements, including minimums, on OTC swaps, which may result in the Fund and its counterparties posting higher margin amounts for OTC swaps, which could increase the cost of swap transactions to the Fund and impose added operational complexity.
- **Early Close/Trading Halt Risk.** An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments, and/or may incur substantial trading losses.
- **Effects of Compounding and Market Volatility Risk.** The Fund has a daily leveraged investment objective and the Fund’s performance for periods greater than a trading day will be the result of each day’s returns compounded over the period, which is very likely to differ from two times (2x) the price performance of corn, before fees and expenses. Compounding affects all investments, but has a more significant impact on funds that are leveraged and that rebalance daily. For a leveraged fund, if adverse daily performance of the price of corn reduces the amount of a shareholder’s investment, any further adverse daily performance will lead to a smaller dollar loss because the shareholder’s investment had already been reduced by the prior adverse performance. Equally, however, if favorable daily performance of the price of corn increases the amount of a shareholder’s investment, the dollar amount lost due to future adverse performance will increase because the shareholder’s investment has increased.

The effect of compounding becomes more pronounced as volatility of the price of corn and the holding period increase. The impact of compounding will impact each shareholder differently depending on the period of time an investment in the Fund is held and the volatility of the price of corn during the shareholder’s holding period of an investment in the Fund.

The chart below provides examples of how reference price volatility could affect the Fund’s performance. The chart illustrates the impact of two factors that affect the Fund’s performance: corn price volatility and the price performance of corn. The price performance of corn shows the percentage change in the price of corn over the specified time period, while corn price volatility is a statistical measure of the magnitude of fluctuations in the price performance during that time period. As illustrated below, even if the price change over two equal time periods is identical, different price volatility (*i.e.*, fluctuations in the rates of return) during the two time periods could result in drastically different Fund performance for the two time periods due to the effects of compounding daily returns during the time periods.

Fund performance for periods greater than one single day can be estimated given any set of assumptions for the following factors: a) price volatility; b) price performance; c) period of time; d) financing rates associated with leveraged exposure; and e) other Fund expenses. The chart below illustrates the impact of two principal factors – price volatility and price performance – on Fund performance. The chart shows estimated Fund returns for a number of combinations of price volatility and price performance over a one-year period. Performance shown in the chart assumes that: (i) no dividends were paid with respect to the reference asset; (ii) there were no Fund expenses; and (iii) borrowing/lending rates (to obtain leveraged exposure) of 0%. If Fund expenses and/or actual borrowing/lending rates were reflected, the estimated returns would be different than those shown. Particularly during periods of higher price volatility, compounding will cause results for periods longer than a trading day to vary from two times (2x) the performance of the price of corn.

As shown in the chart below, the Fund would be expected to lose 6.1% if the price of corn did not change over a one year period during which the price experienced annualized volatility of 25%. At higher ranges of volatility, there is a chance of a significant

loss of value in the Fund, even if the price is flat. **For instance, if the annualized volatility of the price of corn is 100%, the Fund would be expected to lose 63.2% of its value, even if the cumulative change in the price of corn for the year was 0%.** Areas shaded red (or dark gray) represent those scenarios where the Fund can be expected to return less than two times (2x) the change in the price of corn and those shaded green (or light gray) represent those scenarios where the Fund can be expected to return more than two times (2x) the change in the price of corn. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Daily Correlation/Tracking Risk" above.

| One Year Price Performance | Two Times (2x) One Year Price Performance | Volatility Rate | | | | |
|----------------------------|---|-----------------|--------|--------|--------|--------|
| | | 10% | 25% | 50% | 75% | 100% |
| Return | Return | | | | | |
| -60% | -120% | -84.2% | -85.0% | -87.5% | -90.9% | -94.1% |
| -50% | -100% | -75.2% | -76.5% | -80.5% | -85.8% | -90.8% |
| -40% | -80% | -64.4% | -66.2% | -72.0% | -79.5% | -86.8% |
| -30% | -60% | -51.5% | -54.0% | -61.8% | -72.1% | -82.0% |
| -20% | -40% | -36.6% | -39.9% | -50.2% | -63.5% | -76.5% |
| -10% | -20% | -19.8% | -23.9% | -36.9% | -53.8% | -70.2% |
| 0% | 0% | -1.0% | -6.1% | -22.1% | -43.0% | -63.2% |
| 10% | 20% | 19.8% | 13.7% | -5.8% | -31.1% | -55.5% |
| 20% | 40% | 42.6% | 35.3% | 12.1% | -18.0% | -47.0% |
| 30% | 60% | 67.3% | 58.8% | 31.6% | -3.7% | -37.8% |
| 40% | 80% | 94.0% | 84.1% | 52.6% | 11.7% | -27.9% |
| 50% | 100% | 122.8% | 111.4% | 75.2% | 28.2% | -17.2% |
| 60% | 120% | 153.5% | 140.5% | 99.4% | 45.9% | -5.8% |

- **ETF Risks.** The Fund is an ETF and, as a result of its structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading Risk.* Although Shares are listed for trading on the NYSE Arca, Inc. (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than the Shares.
- **Exchange-Traded Products Risk.** The risks of owning interests of an ETP generally reflect the same risks as owning the underlying securities or other instruments that the ETP is designed to track. The shares of certain ETPs may trade at a premium or discount to their intrinsic value (*i.e.*, the market value may differ from the net asset value of an ETP's shares). For example, supply and demand for shares of an ETF or market disruptions may cause the market price of the ETP to deviate from the value of the ETP's investments, which may be emphasized in less liquid markets. By investing in an ETP, the Fund indirectly bears the proportionate share of any fees and expenses of the ETP in addition to the fees and expenses that the Fund and its shareholders directly bear in connection with the Fund's operations. Because the ETPs have a significant portion of their assets exposed directly

or indirectly to commodities or commodity-linked securities, developments affecting commodities may have a disproportionate impact on such ETPs and may subject the ETPs to greater volatility than investments in traditional securities.

- **High Portfolio Turnover Risk.** The Fund, through the Subsidiary, may frequently buy and sell futures contracts and other assets as part of the Fund’s strategy to obtain exposure to agricultural commodities. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect.
- **Intra-Day Investment Risk.** The Fund seeks leveraged investment results from the close of the market on a given trading day until the close of the market on the subsequent trading day. The exact exposure of an investment in the Fund intraday in the secondary market is a function of the difference between the price of corn at the market close on the first trading day and the price of corn at the time of purchase. If the price of corn increases, the Fund’s net assets will rise by the same amount as the Fund’s exposure. Conversely, if the price of corn declines, the Fund’s net assets will decline by the same amount as the Fund’s exposure. Thus, an investor that purchases shares intra-day may experience performance that is greater than, or less than, the Fund’s stated multiple of the price performance of corn.

If there is a significant intra-day market event and/or the price of corn experiences a significant decrease, the Fund may not meet its investment objective or rebalance its portfolio appropriately. Additionally, the Fund may close to purchases and sales of Shares prior to the close of regular trading on the NYSE Arca, Inc. and incur significant losses.
- **Investment Capacity Risk.** If the Fund’s ability to obtain exposure to commodities futures consistent with its investment objective is disrupted for any reason, including limited liquidity in the commodities futures market, a disruption to the commodities futures, or as a result of margin requirements or position limits imposed by the Fund’s FCMs, the DCM, or the CFTC on the Fund or the Adviser, the Fund would not be able to achieve its investment objective and may experience significant losses.
- **Leverage Risk.** The Fund seeks to achieve and maintain the exposure to the price of corn for future delivery by using leverage inherent in futures contracts. Therefore, the Fund is subject to leverage risk. When the Fund purchases or sells an instrument or enters into a transaction without investing an amount equal to the full economic exposure of the instrument or transaction, it creates leverage, which can result in the Fund losing more than it originally invested. As a result, these investments may magnify losses to the Fund, and even a small market movement may result in significant losses to the Fund. Leverage may also cause the Fund to be more volatile because it may exaggerate the effect of any increase or decrease in the value of the Fund’s portfolio securities. Futures trading involves a degree of leverage and as a result, a relatively small price movement in futures instruments may result in immediate and substantial losses to the Fund.
- **Limited Operating History Risk.** The Fund is a recently organized investment company with a limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decision.
- **Liquidity Risk.** Liquidity risk exists when particular investments are difficult to purchase or sell. This can reduce the Fund’s returns because the Fund may be unable to transact at advantageous times or prices.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund’s NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of and/or actual imposition of tariffs by the U.S. and other countries. In addition, local, regional or global events such as war, including Russia’s invasion of Ukraine, acts of terrorism, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets.
- **Non-Diversification Risk.** Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a lesser number of issuers than if it was a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a lesser number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund’s performance.
- **Reverse Repurchase Agreements Risk.** A reverse repurchase agreement is the sale by the Fund of a debt obligation to a party for a specified price, with the simultaneous agreement by the Fund to repurchase that debt obligation from that party on a future date at an agreed upon price. Similar to borrowing, reverse repurchase agreements provide the Fund with cash for investment

purposes, which creates leverage and subjects the Fund to the risks of leverage. Reverse repurchase agreements also involve the risk that the other party may fail to return the securities in a timely manner or at all. The Fund could lose money if it is unable to recover the securities and the value of collateral held by the Fund, including the value of the investments made with cash collateral, is less than the value of securities.

- **Subsidiary Investment Risk.** By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. The derivatives and other investments held by the Subsidiary are generally similar to those that are permitted to be held by the Fund and are subject to the same risks that apply to similar investments if held directly by the Fund. The Subsidiary is not registered under the 1940 Act, and, unless otherwise noted in this Prospectus, is not subject to all the investor protections of the 1940 Act. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to continue to operate as it does currently and could adversely affect the Fund. For example, the Cayman Islands does not currently impose any income, corporate or capital gains tax or withholding tax on the Subsidiary. If Cayman Islands law changes such that the Subsidiary must pay Cayman Islands taxes, Fund shareholders would likely suffer decreased investment returns.
- **Tax Risk.** The Fund may gain most of its exposure to the commodities markets through its investment in the Subsidiary, which may invest directly in commodity-linked derivative instruments, including commodities futures and reverse repurchase agreements. In order for the Fund to qualify as a RIC under Subchapter M of the Code, the Fund must, among other requirements, derive at least 90% of its gross income for each taxable year from sources generating "qualifying income" for purposes of the "qualifying income test," which is described in more detail in the section titled "Federal Income Taxes" in the SAI. The Fund's investment in the Subsidiary is expected to provide the Fund with exposure to the commodities markets within the limitations of the federal tax requirements of Subchapter M of the Code for qualification as a RIC. The "Subpart F" income (defined in Section 951 of the Code to include passive income, including from commodity-linked derivatives) of the Fund attributable to its investment in the Subsidiary is "qualifying income" to the Fund to the extent that such income is derived with respect to the Fund's business of investing in stock, securities or currencies. The Fund expects its "Subpart F" income attributable to its investment in the Subsidiary to be derived with respect to the Fund's business of investing in stock, securities or currencies and accordingly expects its "Subpart F" income attributable to its investment in the Subsidiary to be treated as "qualifying income." The Fund generally will be required to include in its own taxable income the "Subpart F" income of the Subsidiary for a tax year, regardless of whether the Fund receives a distribution of the Subsidiary's income in that tax year, and this income would nevertheless be subject to the distribution requirement for qualification as a RIC and would be taken into account for purposes of the 4% excise tax. The Adviser will carefully monitor the Fund's investments in the Subsidiary to ensure that no more than 25% of the Fund's assets are invested in the Subsidiary to comply with the Fund's asset diversification test as described in more detail in the SAI.

If the Fund did not qualify as a RIC for any taxable year and certain relief provisions were not available, the Fund's taxable income would be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. In such event, in order to re-qualify for taxation as a RIC, the Fund might be required to recognize unrealized gains, pay substantial taxes and interest and make certain distributions. This would cause investors to incur higher tax liabilities than they otherwise would have incurred and would have a negative impact on Fund returns. In such event, the Fund's Board of Trustees (the "Board") may determine to reorganize or close the Fund or materially change the Fund's investment objective and strategies. In the event that the Fund fails to qualify as a RIC, the Fund will promptly notify shareholders of the implications of that failure.

- **Valuation Risk.** The Fund or the Subsidiary may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund or the Subsidiary could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund or the Subsidiary would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund or the Subsidiary at that time. The ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.
- **Volatility Risk.** The value of certain of the Fund's investments, including commodities futures, is subject to market risk. Market risk is the risk that the value of the investments to which the Fund is exposed will fall, which could occur due to general market or economic conditions or other factors.
- **Whipsaw Markets Risk.** The Fund may be subject to the forces of "whipsaw" markets (as opposed to choppy or stable markets), in which significant price movements develop but then repeatedly reverse. "Whipsaw" describes a situation where a security's

price is moving in one direction but then quickly pivots to move in the opposite direction. Such market conditions could cause substantial losses to the Fund.

Performance

The Fund does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.teucrimum.com.

Investment Adviser: Teucrimum Investment Advisors, LLC

Portfolio Managers: Springer Harris, Spencer Kristiansen and Joran Haugens, each Portfolio Managers of the Adviser, have been portfolio managers of the Fund since its inception in December 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the "bid-ask spread."

Recent information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.teucrimum.com.

Tax Information

The Fund's distributions are generally taxable as ordinary income or capital gains (or a combination) unless your investment is held in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
